Clarke Solutions has a dedicated testing and verification team strictly focused upon hardware and software device verification for products such as glucose meters, insulin pumps, and mobile phone interface applications that require strict adherence to FDA guidelines.

Experience

Acquire Automation is dedicated to providing Verification Services for software and hardware device manufacturers. Our engineers are capable of providing support for manual or automated test development and execution as well as requirement and design support on behalf of our customers.

Flexibility

Acquire Automation can provide the resources to manage, develop and execute verification testing to ensure a reliable, high quality product. The combination of our experienced manual verification team and the unsurpassed talent of our automation team allow Acquire to provide our customers with the whole solution.

Success

Acquire Automation understands your testing needs and methods to ensure the quality of your product. Our experience and innovative solutions enhance reliability and reduce test schedules.
